

<デモンストレーションおよび実験の一例>

デモンストレーション:

Illusions: Muller-Lyer, Ponzo, Poggendorff Color Assimilation

Apparent and relative motion: Phi phenomenon, motion recruitment, motion in depth, cycloid motion

Stereo forms: disparity-biased Necker cubes, tilted and rotated bars

Random dot stereograms: static, dynamic and moving

After-effects: McCullough, motion

Kinetic depth: rotating sphere, Saturn illusion, structure from motion

Subjective contours: static, stereo apparent motion, and rotating subjective squares

Equilumiance: heterochromatic flicker, various illusions, square and circle interposition

Fusional/rivalrous stimuli

Tachoscopic demos: Sperling partial report, metacontrast masking

Reading demonstrations

実験

Muller-Lyer

Stereo acuity

Spatial frequency shift

Length discrimination

Dot detection

Stereoscopic size constancy

<システム要件>

Windows 98、Windows ME、Windows 2000、Windows XP
